

A schematic diagram of a waveguide structure. It features a horizontal base line labeled 3. Above this base, there is a curved top surface labeled 4. A vertical double-headed arrow labeled 8 indicates the height from the base to the top surface. Below the top surface, there is a section where the waveguide is coiled, represented by two overlapping loops. This coiled section is labeled 6. An arrow points to the right from the end of the coiled section, indicating the direction of wave propagation.
